

Software Requirements Specification (SRS)

Project Title: Meeting & Task Planner

Deadline: 16-Dec-2025

1. Introduction

1.1 Purpose

This SRS describes the functionalities and requirements for the Meeting & Task Planner system. The goal is to provide a learning-focused platform for new developers to understand full-stack development concepts including frontend form handling, backend logic, database design, and role-based user management.

1.2 Scope

The system allows users to: - Create and manage structured meetings - Log attendance and Minutes of Meeting (MoM) - Assign tasks to attendees - Track task progress meeting-to-meeting

This SRS focuses on enabling learning through implementation of varied input fields, validations, file handling, and database relationships.

2. System Features

2.1 Pre-Meeting Features

- Meeting Creation (Title, Date, Time, Mode, Location/Link, Department, Agenda)
- Attendee Selection (Multi-select from user list)
- Meeting Editing and Rescheduling (with all details editable)

2.2 During-Meeting Features

- Marking Attendance (List of attendees with checkboxes or radio buttons)
- Logging Discussion Points (Note title, content, department-wise linking)
- Assigning Tasks (Link to discussion, responsible employee, deadline)
- Recording task details in structured format

2.3 Post-Meeting Features

- Employees update task status manually
 - Organisers can review task progress
 - Meeting-to-meeting continuity for task review
 - Rescheduling meetings with access to previous details
-

3. User Roles and Access

3.1 Hon. Collector

- Read-only access to all meetings and task progress
- Dashboard view of meeting-wise task summaries

3.2 Organiser

- Full control to create/edit meetings
- Add attendees, mark attendance, log MoM
- Assign and review tasks

3.3 HODs / Employees

- View meetings where they are attendees
 - View and update assigned tasks
-

4. Detailed Form Field Requirements

4.1 Meeting Creation Form

- Meeting Title (text input)
- Meeting Date (date picker)
- Meeting Time (time picker)
- Meeting Duration (number input)
- Meeting Mode (radio buttons: Online/Offline)
- Meeting Location/Link (conditional text input)
- Department (dropdown)
- Agenda (textarea)
- Add Attendees (multi-select dropdown)
- Attach File (optional file input)

4.2 Attendance Form

- Attendee Name (auto-filled)
- Present/Absent (checkbox or toggle)
- Arrival Time (auto/manual time input)

4.3 Notes (MoM) Form

- Note Title (text)
- Note Description (textarea)
- Department (dropdown)
- Linked Task (optional dropdown)

4.4 Task Assignment Form

- Task Title (text)
- Task Description (textarea)

- Assigned To (dropdown)
- Department (dropdown)
- Deadline (date picker)
- Attach File (optional)

4.5 Task Update Form

- Status (dropdown: Pending, In Progress, Completed)
 - Progress Notes (textarea)
 - Last Updated On (auto-generated)
-

5. Non-Functional Requirements

- System must be responsive for mobile and desktop.
 - Role-based access with session management.
 - Form validations on both frontend and backend.
 - All file uploads should have type and size validation.
 - Basic UI/UX with Bootstrap and modals.
-

6. Technical Stack

- **Frontend:** HTML5, CSS3, Bootstrap, JavaScript, jQuery
 - **Backend:** PHP
 - **Database:** MySQL
 - **Server:** Apache (XAMPP)
-
- **Frontend:** Angular/React
 - **Backend:** Java, Springboot
 - **Database:** NA
 - **Server:** NA
-

7. Learning Objectives

- Use of various input fields (text, number, radio, checkbox, date, file)
 - CRUD operations with database linking
 - File upload and download logic
 - Dashboard view with filters and status indicators
 - Modular and scalable PHP coding structure
-

8. Future Enhancements

- Employee Leave Logic
- Dynamic user selection in audit flow
- Export to Excel/PDF
- Search & filter on all views

End of Document
